

In-Store Closed-Loop Management

ACCEPT AND DISBURSE CASH WITH CONFIDENCE AND VISIBILITY

- Bill validation – counterfeit protection in a closed-safe environment
- Bill dispensing – secure, accurate, high-volume cash disbursement
- Armored-car ready – enabling closed-loop cash management
- Secure environment – robbery, burglary and shrinkage deterrent
- Remote visibility – integrated view of cash flow

CSS Cash Management Solutions Provide Speed and Flexibility

For companies who need to accept and disburse cash, having confidence in a solution that can accurately and rapidly process bills is critical. With CSS cash management solutions, you can accept, validate AND disburse cash directly into/from a secure business-rated safe. You also have immediate visibility of cash flow across your entire retail network.

RETAIL CASH MANAGEMENT

In many of today's retail and restaurant establishments, the need to manage cash is as great as ever. Cash is still the most-preferred means of payment for transactions. In addition, many businesses need to disburse large amounts of cash either for cashiers, in exchange for merchandise or to cash customers' checks. In order to transact business in these situations, a large amount of cash is required.

Businesses are constantly looking for new ways to meet the needs of their customers and their business. They need to be responsive to the needs of their customers, and create a safe, secure environment to conduct business. When a large amount of cash flows through

an establishment, normal concerns over security are greatly increased. How can we keep the cash secure? How do we create a safe environment for our employees? How do we know if business rules and processes are being followed across numerous locations? These key questions affect not only the ability to generate revenue but also the ability to control costs. Unfortunately, many of today's businesses fall short in addressing these issues.

Security » Innovation » Service

Unfortunately many of today's kiosks do not have a secure environment for cash, are implemented as standalone "islands" of transactions, or cannot accept cash at all.

CLOSE THE DOOR

Effectively and efficiently accepting and disbursing cash is critical to operations. To do so, you need to have a secure environment with restricted access. This means you need to limit access to where your cash is stored. When you have to open a safe or till to access the cash for a transaction, you are increasing the risk of theft and shrinkage. To avoid these risks, you need a secure enclosure for cash, a means to accept and validate bills and dispense cash without direct access to the entire bank of funds, and remote visibility of its contents.

CSS DELIVERS A COMPLETE SOLUTION

CSS cash management solutions are built on a secure, integrated platform to meet the needs of today's businesses. They are built around a business-rated safe that provides a secure repository for cash.

CSS employs the best bill acceptors and dispensers in the industry, and both are armored-car ready. The bill acceptors can consistently and accurately read all denominations and provide automatic counts of money received, while protecting against counterfeit currency. The large-capacity bill dispensers consistently process transactions in user-defined denominations using ATM-proven technology. Employing acceptors and dispensers in an integrated business-rated safe means the door never needs to be opened. These features not only reduce the threat of theft, shrinkage and counterfeit currency, but also provide businesses the ability to securely execute cash transactions in a closed-safe environment across the enterprise.

CSS cash management solutions can be networked and integrated into existing business systems to provide remote cash monitoring and access management, further enabling a closed-safe environment. Cash received into the safe is secure until removed to make a bank deposit by either an armored-car service provider or an authorized staff member. Access can be granted and monitored remotely to aid in enforcing business rules and identifying procedure violations.

The ability to accept cash in a secure, closed-safe environment also enables productivity gains. Retail staff can spend more time with customers, since they spend less time conducting cash transactions, transferring cash from the point of sale to the safe, counting cash in preparation for a bank deposit and reconciling discrepancies when counts do not match receipts.

Importantly, CSS cash management solutions are backed by outstanding delivery, installation, training and service programs, providing you a total solution.

SECURE CASH DISBURSEMENT

CSS enables you to take retail cash management to the next level by providing:

- **Bill validation – counterfeit protection in a closed-safe environment**
- **Bill dispensing – secure, accurate, high-volume cash disbursement**
- **Armored-car ready – enabling closed-loop cash management**
- **Secure environment – robbery, burglary and shrinkage deterrent**
- **Remote visibility – integrated view of cash flow**

These capabilities enhance your customers' experience by accepting and disbursing cash while conducting your retail transactions, and provide you the visibility to effectively manage a secure network across your retail locations.
